

alternative **construction methods**

"With high design and detail as our specialty, we've found that Design Basics plans are the most accommodating for panelized construction!"

*Paul Ditter,
Ditter System Builders,
Racine, Wisconsin*

In the last decade

, a flood of innovative building techniques has transformed much of the home construction industry. Builders have embraced new technology to build homes faster and more efficiently and to produce a different, and sometimes better, finished product. Our strong relationships with the building community and the manufacturers of these various building systems have allowed us to design home plans that easily accommodate these methods — while maintaining the beautiful curb appeal and marketability we've always been known for. The following pages overview a number of building systems for which we can adapt our designs. 

If you have questions regarding any of these alternative construction methods, ask for our Business Development Department at (800) 947-7526.
